✅ Steps to Serve a File from `/home/aferreira` when you can't use nano

1. **SSH or log into** the machine `10.21.23.227`.
2. **Change to the target directory:**

   ```
   cd /home/aferreira
   ```

3. **Start the HTTP server on port 80 (you may need sudo):**

   ```
   sudo python3 -m http.server 80
   ```

4. **On the client machine**, download the file with:

   ```
   wget http://10.21.23.227/<filename>
   ```

   Or:

   ```
   curl -O http://10.21.23.227/<filename>
   ```
